NWM's Extraordinary Success with Social Scientists

The Value of Our Work: NIW & EB-1A Success for Social Scientists

The National Importance of Foreign-Born Social Scientists

Foreign-born professionals represent a substantial share of the U.S. social science workforce, particularly in economics, public policy, sociology, demography, criminology, political science, and related fields.

Their work is central to evidence-based decision-making in the United States, informing:

- Public policy and regulatory frameworks
- Economic planning and labor markets
- Education systems and social services
- Public safety, governance, and democratic institutions

Our Proven Success in NIW & EB-1A Petitions for Social Scientists

New Weiming Law Group has achieved extraordinary success securing NIW and EB-1A approvals for:

- Economists, policy analysts, sociologists, political scientists, and other social scientists
- Highly specialized professionals working in academic, governmental, nonprofit, and applied research settings

We are recognized for effectively representing social scientists whose impact extends beyond traditional academic publishing.

A Policy- and Impact-Driven Approach to Social Science Excellence

We recognize that many influential social scientists do not have extensive publication or citation records, particularly those working in:

- Government agencies
- Think tanks and policy institutes
- Applied research, evaluation, and program design

Influence in social science is often demonstrated through **adoption, implementation, and societal outcomes**, not journal metrics alone.

Demonstrating "Sustained Major Significance" in Social Science

We establish extraordinary ability and national interest by documenting how our clients' work:

- Shapes or informs public policy, legislation, or regulatory frameworks
- Guides institutional practices, program design, or funding priorities
- Introduces methodologies, models, or analyses used by agencies or organizations
- Improves outcomes in areas such as economic stability, education, public health, equity, or public safety
- Produces lasting societal benefits at the regional or national level

Why This Approach Works

Social science impact is measured by influence on decisions, systems, and outcomes, not solely by publication counts.

USCIS criteria are met through clear evidence of sustained, nationally important contributions to U.S. society and governance.

This framework has proven enormously effective for social scientists across applied and interdisciplinary fields.

Our Reputation

New Weiming Law Group is known for its success representing social scientists whose work strengthens U.S. policy, institutions, and social systems.

We translate complex social impact into persuasive immigration evidence — with precision, credibility, and results.
